WEBSITE DESIGN & DEVELOPMENT BRIEF

A practical guide for the developer building the official ATRO website

PROJECT DIRECTION	Build ATRO as a premium, credible and modern Kenyan design-and-construction brand — not as a generic contractor website. The website should communicate technical competence, architectural quality, reliability, innovation and a clear ability to take a project from concept to construction.

1. Project Overview

Company: ATRO Design & Construction

Primary positioning: Design • Construction • Consultancy • Innovation

Market: Kenya, with the capability to serve a wider African market.

Core website objective: Turn visitors into qualified enquiries while establishing ATRO as a professional, trustworthy and technically capable construction company.

Primary audiences: Homeowners, property developers, commercial clients, institutions, churches, contractors/partners and Kenyans in the diaspora managing projects in Kenya.

2. Brand Identity the Website Must Follow

- Use the supplied ATRO logo as the primary brand mark. Do not redraw, distort or add effects to the logo.
- Primary brand colour: deep burgundy/maroon.
- Accent colour: calm architectural gold. Gold should feel premium and controlled — not bright, neon or overly yellow.
- Supporting colours: warm white/off-white, charcoal and soft neutral grey.
- Overall visual language: modern luxury, architectural, minimal, confident and technical.
- Avoid the look of a cheap local contractor website, overly colourful templates, clip-art construction graphics and excessive animations.
- Photography should show real construction, architecture, materials, teams, sites and finished structures wherever possible.
- Use generous whitespace, strong typography, clean grids and high-quality project imagery.

3. Recommended Website Structure

4. Home Page — Detailed Direction

4.1 Hero Section

The first screen must immediately answer three questions: Who is ATRO? What does ATRO do? What should I do next?

- Large architectural/construction image or high-quality project render as the hero visual.
- Logo visible in the navigation without competing with the hero.
- Primary headline should be short and confident. Recommended direction: “Designing & Building Better Structures.”
- Supporting copy: “Integrated design, construction and consultancy for residential, commercial and institutional projects.”
- Primary CTA: “Start a Project”.
- Secondary CTA: “View Our Projects”.
- On mobile, the headline and CTA must remain immediately visible without excessive scrolling.

4.2 Trust / Capability Strip

Immediately below the hero, show 3–5 concise credibility points, for example:

- Design + Construction
- Technical & Project Consultancy
- Quality & Cost Control
- Transparent Project Management
- Kenya-based Project Delivery

4.3 Services Preview

Use clean service cards with architectural imagery/icons. Each card should lead to the relevant service detail.

- Architectural Design
- Structural Design
- Construction & Project Execution
- Bill of Quantities / Cost Planning
- Project Management & Site Consultancy
- Interior / Spatial Design
- Precast & Construction Solutions
- Other specialist services as ATRO expands

4.4 Featured Projects

Show 3–6 strong projects. Prioritise visual quality and credibility over quantity.

- Project name
- Location
- Project type
- Scope delivered by ATRO
- Status: Completed / Ongoing / Proposed
- 1–3 strong photographs/renders
- Short project description
- Optional project statistics such as floor area, duration or project value where appropriate

4.5 Why ATRO

- Integrated thinking — design and construction considered together.
- Technical approach — decisions based on drawings, quantities, specifications and site realities.
- Cost awareness — helping clients make informed decisions before and during construction.
- Quality-focused execution.

- Clear communication and project visibility.
- Modern construction methods and digital tools.

4.6 Final CTA

End the Home page with a strong burgundy/gold section: “Have a project in mind?” followed by a short sentence and a prominent “Start a Project” button.

5. Services Page — Required Behaviour

The Services page should not be a list of vague marketing statements. Every service should explain what ATRO actually delivers.

- Service title
- Short explanation
- What is included
- Typical project types
- Relevant images
- Expected client inputs / information required
- Clear enquiry CTA

Where a service involves statutory approvals or regulated professional sign-off, the website should use careful wording. Do not imply that ATRO or an individual is legally registered for a regulated role unless the relevant registration/licence is confirmed.

6. Projects / Portfolio Page

This should be one of the strongest parts of the website. Construction clients want evidence.

- Filter by project type: Residential, Commercial, Institutional, Renovation, Church, School, etc.
- Filter by status: Completed, Ongoing, Proposed.
- Project cards should have consistent image ratios.
- Project detail pages should use a large hero image followed by scope, location, status, challenge, ATRO's role, solution and gallery.
- Allow high-quality images to open in a clean lightbox.
- Do not overcrowd project pages with unnecessary text.
- Ongoing projects must be clearly labelled as ongoing; never present an unfinished project as completed.

7. About Page

The About page should communicate the story behind ATRO without becoming a long biography.

- Who ATRO is
- Vision
- Mission
- Core values
- Design + construction philosophy
- Approach to quality, cost and client communication
- Team / professional profiles when ready
- Relevant registrations, affiliations or credentials only when verified

Recommended brand language: ATRO is a modern design-and-construction company focused on creating well-designed, technically sound and efficiently delivered structures.

8. Our Process Page

Create a visual 6–8 step journey. Suggested flow:

9. Contact / Lead Generation

The website should be built around qualified enquiries, not just displaying a phone number.

- Primary CTA throughout site: Start a Project.
- Secondary CTA: Request a Consultation.
- Contact form should capture: Name, Phone, Email, Project Type, Location, Approximate Budget (optional), Stage of Project, Target Start Date and Project Description.
- Allow users to attach drawings/documents where technically feasible.
- Include direct WhatsApp contact for Kenya-based leads.
- Show email, phone and social media clearly.
- Add a confirmation message after form submission and notify the ATRO admin immediately.
- Protect forms against spam.

10. Navigation & User Experience

- Desktop navigation: Home | About | Services | Projects | Our Process | Insights | Contact.
- Keep one persistent high-visibility CTA: Start a Project.
- Header should become sticky after scrolling.
- Mobile menu must be simple and fast.
- Avoid mega-menus unless content grows enough to justify one.
- Every page should have a clear next action.
- Use breadcrumbs on deeper project/service pages if useful.
- Do not make users hunt for contact information.

11. Visual & UI System

- Use a premium sans-serif typeface with excellent readability.
- Headings: bold, architectural and restrained.
- Body: clean, highly legible and not too small.
- Buttons: rectangular with subtle rounding or clean architectural geometry — avoid playful pill-shaped UI everywhere.
- Use burgundy for major brand moments and gold as a restrained accent.
- Cards should have minimal shadows and strong spacing.
- Use subtle hover transitions, not flashy animations.
- Use large imagery and strong cropping to create an editorial architectural feel.
- Maintain consistent spacing, grid alignment and image ratios across the entire website.

12. Motion / Animation

Animation should make the website feel refined, not distracting.

- Soft page-load transitions.
- Subtle image reveal on scroll.
- Small hover movement on buttons/project cards.
- Smooth gallery transitions.
- No excessive parallax, spinning logos, bouncing buttons or auto-playing distracting video.
- Respect reduced-motion accessibility settings.

13. Mobile-First Requirements

- The site must be designed and tested for Android and iPhone screens first, then desktop.
- WhatsApp CTA should be easy to reach on mobile.
- Hero images must be optimised so they do not create long loading times.

- Buttons must be large enough to tap comfortably.
- Project galleries must work smoothly with touch.
- Forms must be short, simple and keyboard-friendly.
- Do not allow horizontal scrolling.

14. Technical Requirements for Developer

15. SEO / Search Strategy

Initial keyword direction should focus on what a Kenyan client would actually search for. Examples:

- construction company in Kenya
- design and construction company Kenya
- building contractors Nairobi / Kiambu / Kenya
- architectural and structural design Kenya
- project management construction Kenya
- house construction company Kenya
- commercial construction Kenya
- construction consultancy Kenya

The developer should implement the technical SEO foundation, while ATRO can continuously provide project-specific and educational content for long-term organic growth.

16. Content & Photography Guidelines

- Prioritise real ATRO project photography and professional architectural renders.
- Show construction details: reinforcement, formwork, concrete, masonry, finishes, site teams and completed structures.
- Use people naturally to demonstrate professionalism and activity, but do not use generic stock photos as the dominant visual language.
- All project photographs must be properly labelled and approved for public use.
- Use captions where they add useful context.
- Never publish client information, drawings, addresses or project values without permission.

17. Social Media Integration

- Instagram/social links should be visible but secondary to the main website conversion CTA.
- Project pages should be shareable.
- Add Open Graph metadata so links shared on WhatsApp, Facebook and LinkedIn display a professional image, title and description.
- Use the website as the main source of truth; social media should drive traffic back to the website.

18. Admin / Content Management

ATRO should be able to update the following without calling the developer:

- Project images and project descriptions
- Project status
- Services
- Team members
- Insights/articles
- Contact details
- Homepage featured projects
- Testimonials

- SEO titles/descriptions where appropriate

19. Recommended Future Features
    - Project enquiry dashboard.
    - Client project portal for approved clients.
    - Construction progress updates / photo timeline.
    - Downloadable company profile.
    - Online consultation booking.
    - Project cost-planning enquiry workflow.
    - Newsletter / construction insights subscription.
    - Integration with future ATRO digital tools or myhardware ecosystem where strategically appropriate.
20. Content ATRO Will Provide vs Developer
21. Developer Deliverables
    - Wireframes / sitemap before full development.
    - Desktop + mobile UI design.
    - Fully responsive website.
    - CMS/admin access.
    - Working enquiry/contact system.
    - SEO-ready page structure.
    - Analytics and conversion tracking.
    - Performance optimisation.
    - Security configuration.
    - Testing on major browsers and mobile devices.
    - Deployment to ATRO domain and hosting.
    - Basic handover/training for ATRO.
    - Documentation of logins, hosting, domain, CMS and integrations.
22. Acceptance Checklist
    - ■ Logo and brand colours are used consistently.
    - ■ Home page communicates ATRO's value within the first screen.
    - ■ All primary services have clear descriptions and CTAs.
    - ■ Projects are visually strong and easy to browse.
    - ■ Contact form works and notifications reach ATRO.
    - ■ WhatsApp contact works on mobile.
    - ■ Website is responsive on common phone, tablet and desktop sizes.
    - ■ Images are optimised and pages load quickly.
    - ■ Basic SEO is implemented.
    - ■ Analytics/conversion tracking is working.
    - ■ CMS allows ATRO to update core content.
    - ■ HTTPS/security is active.
    - ■ No broken links, placeholder text or template branding remains.
    - ■ All client-provided project information has been approved before publication.
23. Suggested Homepage Copy Direction

Primary CTA: START A PROJECT | Secondary CTA: VIEW OUR PROJECTS

Supporting brand message: “From concept to construction, ATRO brings design thinking, technical expertise and practical project delivery together.”

24. Final Instruction to the Developer

The final website should be premium but approachable, technically credible but easy for a non-engineer to understand, and visually distinctive without sacrificing speed or usability.

ATRO • DESIGN & CONSTRUCTION

APPENDIX — STRUCTURED TABLES

PROJECT DIRECTION
Build ATRO as a premium, credible and modern Kenyan design-and-construction brand — not as a generic contractor website. The website should communicate technical competence, architectural quality, reliability, innovation and a clear ability to take a project from concept to construction.

IMPORTANT
The website should feel like a serious design-and-build company. Think premium architecture studio + technically competent construction company, rather than a hardware shop or ordinary building contractor.

Page	Purpose	Priority	Main CTA
Home	Introduce ATRO, establish trust and drive enquiries.	Critical	Start a Project
About ATRO	Explain who we are, philosophy, values and approach.	High	Work With Us
Services	Present design, construction and consultancy capabilities.	Critical	Request a Consultation
Projects	Show completed/ongoing work with strong visuals and facts.	Critical	Discuss Your Project
Our Process	Explain the journey from brief to completion.	High	Start Your Project
Insights / Resources	Build authority through construction education and useful content.	Medium	Read More
Contact	Capture qualified leads and make contacting ATRO easy.	Critical	Request a Quote

01	Initial Consultation	Understand the client's goals, site and budget.
02	Site & Project Assessment	Review available site information, constraints and requirements.
03	Concept & Design	Develop the appropriate architectural/technical direction.
04	Cost Planning	Prepare quantities, budget guidance and scope alignment.
05	Approvals & Pre-Construction	Coordinate the required documentation and pre-construction requirements.
06	Construction	Execute works with quality, safety and programme control.

01	Initial Consultation	Understand the client's goals, site and budget.
07	Monitoring & Communication	Keep the client informed on progress, decisions and issues.
08	Handover	Complete, inspect and hand over the project.

Requirement	Developer Direction
Performance	Target fast loading, especially on Kenyan mobile networks. Optimise images and lazy-load below-the-fold media.
SEO	SEO-friendly URLs, page titles, meta descriptions, heading hierarchy, image alt text, sitemap and robots.txt.
Analytics	Install Google Analytics and/or equivalent analytics with conversion tracking for forms and CTA clicks.
Security	HTTPS, secure admin access, spam protection, regular backups and current dependencies.
CMS	Use a CMS that allows ATRO to update projects, services, images and insights without editing code.
Forms	Validate inputs, prevent spam, send reliable email notifications and store submissions securely.
Images	Use modern compressed formats such as WebP/AVIF where appropriate without visibly reducing quality.
Accessibility	Good colour contrast, keyboard navigation, descriptive labels, alt text and readable font sizes.
Scalability	Structure the site so new services, projects, locations and content can be added without redesigning the site.

DO NOT OVERBUILD V1
The first version should be fast, premium and conversion-focused. Build a strong foundation first; add advanced portals, dashboards and integrations only when there is a clear business case.

ATRO / Client	Developer / Technical Team
• Approved logo and brand assets • Company description, vision and mission • Service descriptions and scope • Project information and approved photos • Team/professional information • Contact details and social handles • Testimonials and approvals for publication	• UI/UX design system • Responsive frontend/backend • CMS setup • Forms and notifications • SEO implementation • Analytics and conversion tracking • Security, backups and deployment • Testing and performance optimisation

HERO
DESIGNING & BUILDING BETTER STRUCTURES.
Integrated design, construction and consultancy for projects built with purpose, precision and quality.

BUILD PRINCIPLE

Do not simply build a website that looks good. Build a website that sells confidence. A potential client should leave the website believing that ATRO understands design, understands construction, communicates clearly, manages projects professionally and can be trusted with a serious building project.
